***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Parish et al., (6,462,949). Parish et al., disclose an electronic enclosure cooling system comprising a refrigerant loop (inherent because the condenser the liquid to air heat exchanger 200 is an external condenser unit much like that used in residential air conditioning system; column 2, lines 63-65), the refrigerant circuit driven by a motor (inherent for same previous reason), an air cooled condense arrangement 200 having at least one coil 210 and an evaporator arrangement connected in a first closed refrigerant loop (inherent for the same previous reason); a power amplifiers and other electrical components 110, comprising a cooling system to cool the components, being in fluid communication with the at least one coil 210 of the air cooled condenser arrangement 200. Parish et al., disclose the invention substantially as claimed as state above. See Fig. 1, 2a-2c, and 3a-3b. However, Parish et al., do not disclose a control panel for controlling operation of refrigerant loop. Though Parish et al., do not disclose cooling of specifically an electronic controller, Parish et al., teach the similar cooling of electronic components with a similar cooling circuit. Therefore, the teaching of Parish et el., is obviously meeting the claimed invention.
